

**HOW TO
CREATE A MULTI-TIER PORTFOLIO
ON THE**

Squarespace Website Builder

Michael Conway - Means-of-Production

YOUR PORTFOLIO WILL HAVE THREE PAGE LEVELS

Tier One - Portfolio of Project Types

Tier One is a regular page with a gallery of images that show examples of **all of the services** you offer by project type. This should include top level categories like "Kitchen Remodeling", "Master Bathrooms", "Finished Basements", Etc.

Tier Two - Portfolio of Projects

Tier Two is a regular page with a gallery of images that show examples of a **single service** you offer. This should include all of the "Kitchen Remodeling" projects you want to show on your website. Create a page and gallery for each project type.

Tier Three - Portfolio Of Project Pages

Tier Three has multiple regular pages for each **individual project**. They have images project descriptions and calls to actions. Each page should include eight to twelve images. There are an infinite number of options available for creating a project page.

Tier One

PORTFOLIO OF ALL SERVICES

Tier one is the introductory page to all of the services you offer by project type. This page is made up of individual image blocks or a summary block that shows images from a hidden gallery page. The image, title and call to action are linked to the portfolio page that shows all of your projects in a specific service category.

Tier Two

PORTFOLIO OF PROJECTS BY SERVICE

Tier two is the portfolio page with all of the projects in a specific service category. This example page shows Finished Basements. This page can also be individual image blocks or a summary block that shows images from a hidden gallery page. Each image links to the project page.

New Finished Basements and Basement Remodeling Finished Basements for Residential Homes

A finished basement should have the same look and feel as the rest of the house. Accomplishing this requires keen attention to detail. Because of the time we take in the design phase, you know your basement will be finished on time, on budget, and to your specifications. Contact us, and we'll help you transform those concrete walls into your favorite room in the house.

Tier Three

INDIVIDUAL PROJECT PAGES

Tier three is your set of project pages. It is the last page in the sequence. This page should be designed using image blocks or multiple gallery blocks. In the image block design section choose the Enable Lightbox setting for each image. Include a text link or button at the bottom of each project page that takes visitors back to the tier two page.

This Basement Remodel Was Finished In Time For The Super Bowl

This finished basement remodeling project was designed and built for a young professional couple living in Madison, WI. Eric and Amber were expecting their first son and their goal was for us to have the project completed in time for the Super Bowl and a soon to follow baptism. The house is their first and being a starter home, they were looking to add additional living space in a traditional yet refined design style. Our clients requested a wet bar and entertainment area, a living & media area with fireplace, and a bathroom with a shower. They also wished to have a structural column removed to create a more open space.

A Basement Designed For Entertaining

Key to the open concept floor plan was the removal of a column and the installation of a steel beam that clear spans the 15 foot room, carrying both first floor and second floor load. Opening up the room provided room furniture placement options such as the oversized sectional seating and an unobstructed view of the fireplace from the wet bar. The peninsula bar accommodates seating for four guests and matches to the back bar area symmetrically. A pantry closet utilizes the rest of the space on the back wall. A mirrored backsplash, cherry-tone wood, a light tone quartz countertop, and X-grid mistle glass cabinet doors are design elements that create the clients desired look and feel.

A Living Space With Every Amenity

This modest home has a small living room on the main level, with a compact eat-in kitchen. The finished basement is now the primary living space in the home. Having the television located here meant access to water and beverages was a requirement. The wet bar, a room for working out in the unfinished area and a bathroom with a shower provides everything they need in one location. The fireplace was installed in order to keep the room cozy. Gas fireplaces are not only beautiful, they are a great way of controlling the temperature of a basement room independently from the rest of the house.
